

FILTRATION AND OPTIONAL ACCESSORIES

S-Class Filtration - The air is pure. The SEBO AUTOMATIC X is equipped with S-Class filtration, meeting the high hygiene standards of health facilities worldwide. Approved by The British Allergy Foundation and the National Asthma Council of Australia Sensitive Choice® Program.

1 The sealable 3-layer, 5.3L Ultra filter bag is the first stage of the closed microfilter system. Bag volume is optimised using top-fill technology. Dirt is drawn down resulting in longer bag life.

2 The second stage is a side-mounted Mirco Hygiene Filter, absorbing the remaining dust particles down to <- 0.01 µm. Unlike conventional filtration systems, the micro-hygiene filter uses electrostatic principles. Charged microfibers attract the dust particles and hold them tight. The result is a much finer filtration with excellent suction power.

3 The final stage is the exhaust filter, which is also made of electret material. The air is clean back into the atmosphere for improved indoor air quality (IAQ).

Ideal for Asthma and Allergy Sufferers.

Using a SEBO vacuum cleaner can contribute to positive Building Biology by removing harmful allergens (house dust mites, mould, pet and pest dander) and improving indoor air quality (IAQ) not to mention also keep your soft floor furnishing looking great for many years to come.

Wall and floor brush

For hard floors that are either too rough or too sensitive, and for a quick dusting of textile wallpaper, curtains and upholstered furniture (1325HG)

Hand Held Turbo Brush

Air driven brush for cleaning stairs, upholstered furniture, mattresses and the car. Even stubborn lint and animal hair are removed (6179ER)

MADE IN GERMANY

THE SEBO AUTOMATIC X SERIES: ALLROUND-CLEANING FOR YOUR HOME.

You may have different floor types in your home and you want a vacuum cleaner that meets every challenge? No problem. The SEBO AUTOMATIC X designed in particular for effective and gentle cleaning of different floor coverings. Changing from carpet to hard floors happens automatically without compromising dust or pet hair pick up. You don't have to worry about brush height settings, you simply switch on your machine and it does the thinking and adjusting for you - automatically! With the practical hand suction wand you have an extended range of 2.6m so you can easily vacuum edges and ceilings.

Equipped with the latest generation S-Class filtration: the high performance allergy filter achieves the emission class rating of "A" - the most efficient.

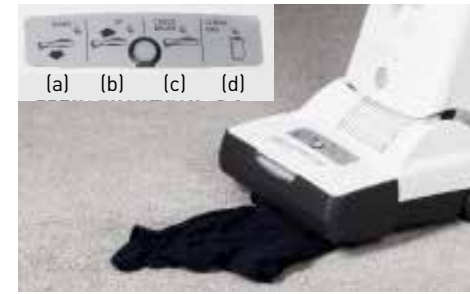

Intelligent Brush Roller Design. (Clean or Replacement)
Lightning-fast and without tools, the brush roller can be removed by pressing a button allowing wound hair and threads to be removed. Just as easily replace a worn brush. The cleaning flap on the underside of the SEBO AUTOMATIC X also allows you easy access to the suction channel to remove any obstructions.

Automatic positioning of the filter bag - housing door lock.
The filter bag indicator alerts you when the bag needs changing. The practical hygienic lid seals the filter bag allowing no dust to escape upon disposal - true hygienic debris disposal. When closing the housing cover, the new filter bag automatically positions itself on the suction channel and seals it. Note: if the filter bag or micro-hygiene filter is missing, the housing cover will not close for safety's sake.

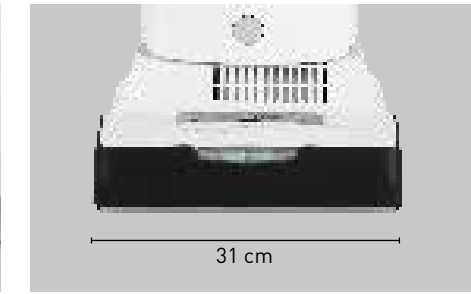

Automatic shutdown - Safe and reliable at all times.
The computer control system informs you when the brush height will be adjusted (a & b) or if the filter bag (d) is full. The SEBO AUTOMATIC X switches off for safety if the brush is blocked (c) or there is a blockage (d). If lit (c) permanently, the brush must be replaced. No guess work required.

Integrated wand with telescopic tube - Convenient without bending.
Hand suction wand with retractable telescopic tube and hose gives a cleaning range of 2.60 m. Reach areas high or low without exertion and clean stairs with ease. Once the work is done the hose slides back into the telescopic tube on its own.

Carrying handles - Two for choice.
The carrying handles on the front and the back allow comfortable lifting and carrying of the unit at any time. The unit can also be tilted back and rolled for effortless transport from storage to use.

Compact size - Suitable for living spaces.
The SEBO AUTOMATIC X7 (31 cm) is the ideal size for vacuuming homes small or large and is the perfect size to reach in between chair legs. The small footprint ensures neat storage of the unit in a broom closet or flat under a bed.

SEBO. MADE IN GERMANY. YOUR SPECIALIST FOR FLOOR CARE

Established in 1977 in Germany, SEBO is still the world's largest manufacturer of commercial upright vacuum cleaners and boasts a presence in over 20 countries. SEBO is still a family business with a real care for the design and manufacture of the products it makes. SEBO has become an established brand name in the retail market, winning many accolades from Australian consumer group CHOICE and many others for the quality, performance and reliability of its vacuum cleaners and Recommended by Carpet Manufacturers for the correct care and maintenance of their soft floor textiles. SEBO Floorcare is of anti-allergy design ideal for Asthma and Allergy sufferers - Approved by the Sensitive Choice® Program.

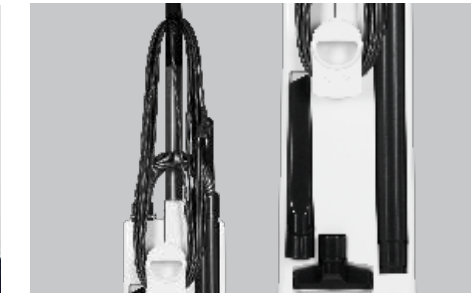

Plush / thick / heavyweight pile specialist

Recommended by renowned flooring manufacturers

Flat to the floor vacuuming.
The SEBO AUTOMATIC X vacuums at full power when completely flat. With a height of only 14 cm it can reach effortlessly under the sofa.

Neat cable storage - Holds a lot of length.
With one simple turn you get a whole 13m radius of cleaning action. This allows you to effortlessly vacuum without constantly to have to change powerpoints.
Accessories - Always at hand.
The upholstery and crevice nozzles are located on the back of the unit and can be easily placed on the hand suction tube or directly on the hose at any time. The dusting brush is stored on the front of the unit.

Automatic height adjustment of the brush - Multi floor vacuuming.
The sensor-controlled height adjustment permanently measures the torque (resistance) of the rotating brush. As a result, the brush always adjusts automatically to any floor covering, whether carpet or hard floor*. In addition, a rubber lip seals behind the brush in the lowest brush setting and leads even the finest dust to the suction flow.

* This is a general guide only. Correct floor head/setting must be used. If in doubt please consult SEBO Customer Services or your flooring supplier.
